Bourque Logistics Introduces RAILPort® 3.0

Industrial Shippers can now manage all of their reporting needs with RAILPort®.

The Woodlands, TX - April 25, 2013 - Bourque Logistics (BL), the leader in logistics software for industrial shippers, introduces the latest version of RAILPort®. This web-based report tool allows you to quickly customize and distribute reports of your own design and requirements. In addition, the RAILPort® report writer offers Bourque Logistics' base reports also known as "templates". These time-saving template reports are provided for your convenience and allow you to build your own customized reports using them as a base.

RAILPort® 3.0 was created to easily extract and format information sets from all of the Bourque Logistics modules including RAILTRAC®, YardMaster®, eBILL®, RAILAcct®, RateServer®, TransPay® and others. The FILTER function enables you to specify the data you would like to see in your report or cut out data you wish to eliminate. RAILPort® also offers the ability to customize the column, sort and group sections and also calculate totals & averages.

RAILPort® is extremely functional and allows your reports to be easily distributed to your customers via email in Excel, PDF, live link, CSV or HTML formats. The *live link* functionality provides your customers and/or colleagues with the ability to refer back to that same link with up-to-date reporting information each time the link is clicked. Additionally, the "share" functionality is a collaborative tool among colleagues to use each other's report criteria to build your own customized report. The scheduling tool allows you to schedule report frequency based on the day, week and more. Last but not least, the MAP function shows you where your cars are located, geographically speaking.

About Bourque Logistics

Headquartered in The Woodlands, Texas, Bourque Logistics has automated rail shipment processes for shippers since 1989 with RAILTRAC®, the leading rail fleet and shipment management software for rail shippers.

BL now provides a full suite of modules to address multi-mode shipment operations for loading and shipping, bill of lading submission, tracking and tracing, freight rating and payment, fleet accounting, supply chain management and custom reporting. Our EDI data services connect shippers with their suppliers, customers, and carriers. BL also provides professional service support for rail fleet expediting and railcar maintenance management.
